RUD Conveyor & Drive technology

High performance for all environments

Irrespective of whether one is interested in horizontal, curved or vertical drive concepts - RUD conveyor and drive systems provide a variety of system solutions with round steel chains for various applications in bucket elevators, power generation, onshore and offshore, underground mining and in the industrial and hoist chain sectors.

Numerous internationally acclaimed companies show confidence in RUD Drive technology:

RUD MEANS **INNOVATION**

TECDOS offers drive innovations for industrial, harbour and offshore applications. Always searching for perfection.

Examples of applications p. 8

RUD PROVIDES **COMPLETE SOLUTIONS**

TECDOS offers intelligent modules and complete systems customised to your specific application.

Systems p. 18

RUD GUARANTEED **QUALITY**

TECDOS components and modules succeed where other systems fail. A malfunction-free operation is also possible under harsh weather conditions.

Product overview p. 20

RUD PROMISES **COMPETENT CONSULTING**

Our sales and marketing team comprises worldwide, competent contact partners who can advise you with technical matters and are always willing to face up to new challenges.

**ROBUST, EFFECTIVE,
SPACE-SAVING.**

MOVE ADJUST DRIVE

Innovative and high-performance drive systems
for linear and rotating movements.

2. TECDOS® drive solutions

2.1 Lifting

Sectional door drive units Moving doors with weights of several tonnes

Doors which weigh several tons e.g. in hangars or industrial halls must be reliably opened and closed, so neither people may be injured nor objects may be damaged. A combination of diverse technical drive components provides a trouble-free application.

→ Scan the QR code and watch the video!

RUD Solution

- TECDOS premium chain strands for lifting and lowering
- RUD lifting means and aids as linkage for counterweights
- TECDOS chain wheels: weather resistant, corrosion resistant and robust
- End user can combine roller chain with round link chain

Gangway Robust, variable and compact

Gangways and ship access systems must be adjustable in longitudinal and transverse directions as well as for the height for different models and sizes of vessels so that safe access for passengers and crew is ensured.

RUD Solution

- TECDOS medium chain
- Pi-drive
- End fixing
- Lift limiter

Wagon unloading equipment

Rapid and safe material unloading

A shunting transshipment port for bulk goods requires a facility with which railway wagons could be unloaded rapidly and safely. Loads of up to 100 tons could not should be lifted and tipped in this case.

RUD Solution

- TECDOS medium chain
- Pocketwheels

Lifting equipment for final vehicle assembly

Variable height for ergonomic working

Vehicles attached to load frames must be traversed variably in height to enable ergonomic working during final assembly. The load frames must not hereby swing in the horizontal axis and only limited installation space is available for the drive unit.

RUD Solution

- TECDOS premium chain, tensioned all round as crisscross
- 4-fold pocketwheel-drive shaft
- pocketwheel deflection wheels
- Chain guide
- End fixing

→ Scan the QR code and watch the video!

2. TECDOS® drive solutions

2.2 Telescoping

Ship Loader

Flexible ship loading

Mobile ship loaders with mobile booms are utilised for loading of bulk goods on cargo ships. This equipment enable the cargo to be evenly distributed in the freight hold.

RUD Solution

- TECDOS premium chain
- Pocketwheel in OMEGA arrangement
- Chain guide
- End fixing

→ Scan the QR code and watch the video!

2.3 Process

Rail Wagon Unloading System

Handle heavy object safely

The availability of the railway wagon unloading system should be increased.

RUD Solution

- TECDOS premium chain
- Pocketwheel in OMEGA arrangement
- End fixing

Spud Pole Skidding

Anchoring and positioning system for dredgers

Dredgers must be positioned safely and moved forward step by step in order to expand and dredge canals.

The 9 m long travel route is therefore executed at a speed of 5m/minute. The tensile forces on the chains normally amount to 90kN although they can increase up to 130kN.

RUD Solution

- TECDOS premium chain
- End fixing
- TECDOS OMEGA Drive

→ Scan the QR code and watch the video!

Skidding

Reliable solution for moving loads from one point to another

For bulk material handling on a dredger, a robust and easy-to-install solution was sought, which is particularly resistant to sand or gravel blocking.

RUD Solution

- OMEGA drive concept
- TECDOS premium chain
- End fixing

→ Scan the QR code and watch the video!

2. TECDOS® drive solutions

2.3 Process

Spooling

Equipment for cable winches and double drum winches

For a hydraulically driven double drum anchor towing winch with a cable pull of 500 tons, a winding device was needed.

RUD Solution

- TECDOS medium chain
- End fixing for round link chain
- Double strand pocketwheel

2.4 Rotating

Blade Turning Device

Transporting bulky, sensitive rotor blades

Assembling and erecting turbines requires handling equipment with which the long rotor blades [up to 80 Mtrs] can be secured, aligned horizontally and rotated around the longitudinal axis.

RUD Solution

- TECDOS medium chain
- Pocketwheels

→ Scan the QR code and watch the video!

Rotating & Turning Equipment

Rotating rotor blades

Rotor blades for wind turbines are laminated in half-shells during manufacturing. To ensure that the multiple layers of glass-fibre or carbon-fibre-reinforced plastic can be inserted with millimetre precision and without wrinkles, the half-shells must be rotated around the longitudinal axis during moulding.

RUD Solution

- TECDOS premium chain
- Pocketwheel in OMEGA arrangement
- End fixing

→ Scan the QR code and watch the video!

TOOL MOOVER Handling

Handle heavy tools safely

„Turning heavy tools safely“ - the RUD TOOL MOOVER was specially developed for the safe turning of heavy-duty tools and heavy-duty workpieces in your manufacture facility.

RUD Solution

- TECDOS premium chain
- TECDOS end fixing
- TECDOS Omega Drive
- Compatible accessories optional

→ Scan the QR code and watch the video!

Configure your TOOL MOOVER quickly and easily!

3. Systems

**SAFE THROUGH
DAILY LIFE.**

HANDY RISKFREE FLEXIBLE

Our systems and components guarantee sustainable solutions, even under difficult conditions. TECDOS systems are user friendly and can be combined flexibly.

3. TECDOS® Systems

3.1 Product overview | individual components

For the construction of a complete TECDOS drive solution, based on the TECDOS high performance round link chain, we can provide the most diverse components and systems for every requirement. All TECDOS round steel chains are stamped and this ensures traceable evidence to the melt over standard 3.1 certificates.

→ p. 28

3. TECDOS® systems

3.2 PI / GAMMA drive | Pocket wheel blocks

PI pocketwheel blocks enable vertical and horizontal drive with 180° chain wrapping, while the GAMMA pocketwheel block is utilised for drives with 90° redirection.

PI wrap angle 180°

GAMMA wrap angle 90°

Attachements PI / GAMMA:

Along with TECDOS end fixings, many attachment solutions are available from the VIP lifting means* program.

*The VIP standard bolt must be replaced by a TECDOS special bolt when combining TECDOS chains.

PI-/GAMMA drive principle

Versatile module for drive and idler application. Integrated roller bearings. Drive shaft free of additional forces. No shaft required when used as idler module. Integrated chain guide and stripper.

Advantages:

- Versatile application possibilities as drive unit module & redirection module
- Integrated bearing
- Chain guide and stripper integrated
- Drive shaft without any additional forces
- Shaft not required when utilising redirection module

TIP

We can also provide special paintwork according to maritime specifications on request.

Multiple chain strand systems PI / Gamma

Modular design for highest-possible flexibility when selecting electrical, hydraulic or pneumatic motors.

System applications for TECDOS PI/GAMMA:

Vertical PI drive

Vertical PI drive unit as double arrangement with two parallel operating drive units.

Also possible in 2, 3 and 4 fold arrangements with drive units depending on the application.

Horizontal PI drive

Horizontal drive unit as double arrangement with two parallel operating PI drive units.

Also possible in 3 and 4 fold arrangements with drive units depending on the application.

Double strand with GAMMA drive

Vertical GAMMA drive unit as double arrangement with one drive units.

Also possible in 3 and 4 fold arrangements with drive units depending on the application.

TECDOS ADVANTAGE:

ALL FROM ONE MANUFACTURE

3. TECDOS® Systems

3.3 OMEGA DRIVE | Innovative drive system

OMEGA DRIVE is the ideal drive solution for linear or rotating movements. In order to process a running crane trolley on a carrier, ship cranes on a rail or for skid application. The OMEGA DRIVE is superior to comparable rack and pinion and sprocket wheel solutions.

In comparison it is less sensitive to dirt, sand, ice, etc., is easier to mount and tolerates deviations of alignment. The modular concept allows the drive through electric, hydraulic or pneumatic motors, at order point electric motor can be supplied.

OMEGA DRIVE principle

OMEGA DRIVE complete system

OMEGA DRIVE offers quiet and reliable performance long after that of a rack and pinion drive.

OMEGA DRIVE is resistant to ice, dirt, rain and aggressive environments. This drive concept has proven itself in many applications worldwide.

OMEGA DRIVE applications

RUD OMEGA DRIVE is the solution: for moving ship cranes, tracking solar panels to the sun, or simply traversing a machine.

Supplementary parts for flangemounting of motors available on request.

3. TECDOS® Systems

Complete system | Versatile drive systems for linear and curved motion

1. Linear travel, fixed drive and moving chain / equipment

2. Moving drive and fixed chain / equipment

3. Fixed drive and rotating chain / equipment

4. Fixed chain, drive / equipment moving along curved path

Your perfect companion for various systems:

- Moving harbour and ship cranes
- Aligning and adjusting ship loading and unloading
- Opening and closing sliding doors in the holds
- Rotating and lifting platforms
- Propulsion for ferries on rivers and lakes
- Moving wagons for unloading
- Extending telescopic booms for ship loaders and cranes
- Moving sea posts (spud pole)
- Traversing Skidding Systems

OMEGA DRIVE

Approval by major maritime classification societies possible

Spezifikationen:

- Operating force 6 – 260 kN
- Mobile or fixed drive
- OMEGA DRIVE - Weight 20 – 2.163 kg
- Chain speed 1 - 6 m/minute with full load, up to 12 m/minute with part load

Technical data

→ p. 45

3.4 OMEGA DRIVE modular system | for maximum flexibility in the choice of an electric, hydraulic or pneumatic motor

OMEGA DRIVE is available in 7 various operational forces:

Product advantages:

- less sensitive to dirt, sand, ice
- easy to mount
- tolerates alignment and measurement deviations, such as temperature elongation
- does not generate reaction forces
- can be used in all directions
- weather and corrosion resistant

3. TECDOS® Systems

3.5 TOOL MOVER handle heavy objects safely and easily

Problems with conventional rotating and turning equipment: Huge operator risk, Potential damage to costly tools and damage to hoist brakes and ropes.

RUD Solution: TOOL MOVER turned heavy, sensitive tools & machine components.

The TOOL MOVER can be used anywhere in the plant, since it is not anchored to the floor and is very compact**. The TOOL MOVER can be moved with a hoist (lifting points) or lift truck (fork insertion points). Since the TOOL MOVER table has a very low supporting surface, the open tool can be cleaned while on the table itself. The TOOL MOVER is equipped with PU* plates to protect the tool. The TOOL MOVER can handle tools and objects weighing up to 64 tons. A siren to indicate that the table is operating is standard equipment.

*only THS 10 **no standard

„The highest priority in the purchase of RUD TOOL MOVERS was the safety of our employees. Furthermore, damage to the items to be turned is effectively excluded. In addition, we save considerable working hours. With the TOOL MOVER, only one employee turns the tool in half the time, which often took two or three men when turning the crane. In addition, the hall floors and lifting gear are protected.“

4. Spare parts & Components

**A WELL-ROUNDED
RESULT.**

A vertical green-tinted image on the left side of the page, showing a close-up of a mechanical component, possibly a chain or a part of a drive system, with visible bolts and a textured surface.

ROBUST DURABLE SAFE

For all TECDOS drive solutions always the optimum chain selection for pivoting, lifting, handling, telescoping and rotating.

4. TECDOS® Spare parts & components

4.1 TECDOS® Round link chain | Material and application benefits

The core component of each TECDOS system application is a highly wear-resistant RUD round link chain for maximum service life – even with wear-resistant media. Extremely dynamic strength therefore ensures maximum operational safety.

TECDOS is always the best solution:

- when high forces have to be transmitted within limited space
- when three-dimensional mobility is required
- under severe environmental conditions
- when exposed to weather
- in offshore, underwater and harbour applications
- when the means of traction has to have optimized storage capacity

TIP

Lubrication enables you to achieve up to 10-15 fold service life.

- when frequent use is required

- when infrequent use is required

Reliable with more frequent actuation

4. TECDOS® Spare parts & components

4.2 TECDOS® pocket wheels

Case hardened TECDOS pocket wheels are optimally designed to work with TECDOS chain and guarantee long life and silent running.

Features:

1. All TECDOS chain wheels are made of low-alloy steel, completely machined and surface-hardened
2. Chain wheels available for loads from 6 kN up to 260 kN
3. Geometry of the pockets is perfectly coordinated to the TECDDOS round steel chain
4. The bore and hub designs can be designed as customer-specific requirements (toothing possible with specification from DIN standard)
5. Rust resistant and acid resistant drive and redirection wheels available on request

TECDOS® chain wheels for drive units and redirection can be manufactured for single and multiple chain strand configurations. Available on request for all chain sizes from TEC 6 to TEC 260 for loads from 6 up to 260 kN.

TIP

All TECDOS components can be delivered as rust resistant and acid resistant.

4.3 TECDOS® Chain guide

Chain guides are used under severe environmental conditions, when one chain strand is not loaded, when the chain is prone to jumping off the sprocket wheel, to ensure smooth running of the chain over the sprocket wheel.

Differences of the two executions:

- Machined chain guide heat treated for optimal wear resistance
- Chain guide laser cut, without heat treatment
- radially divided for simplified assembly

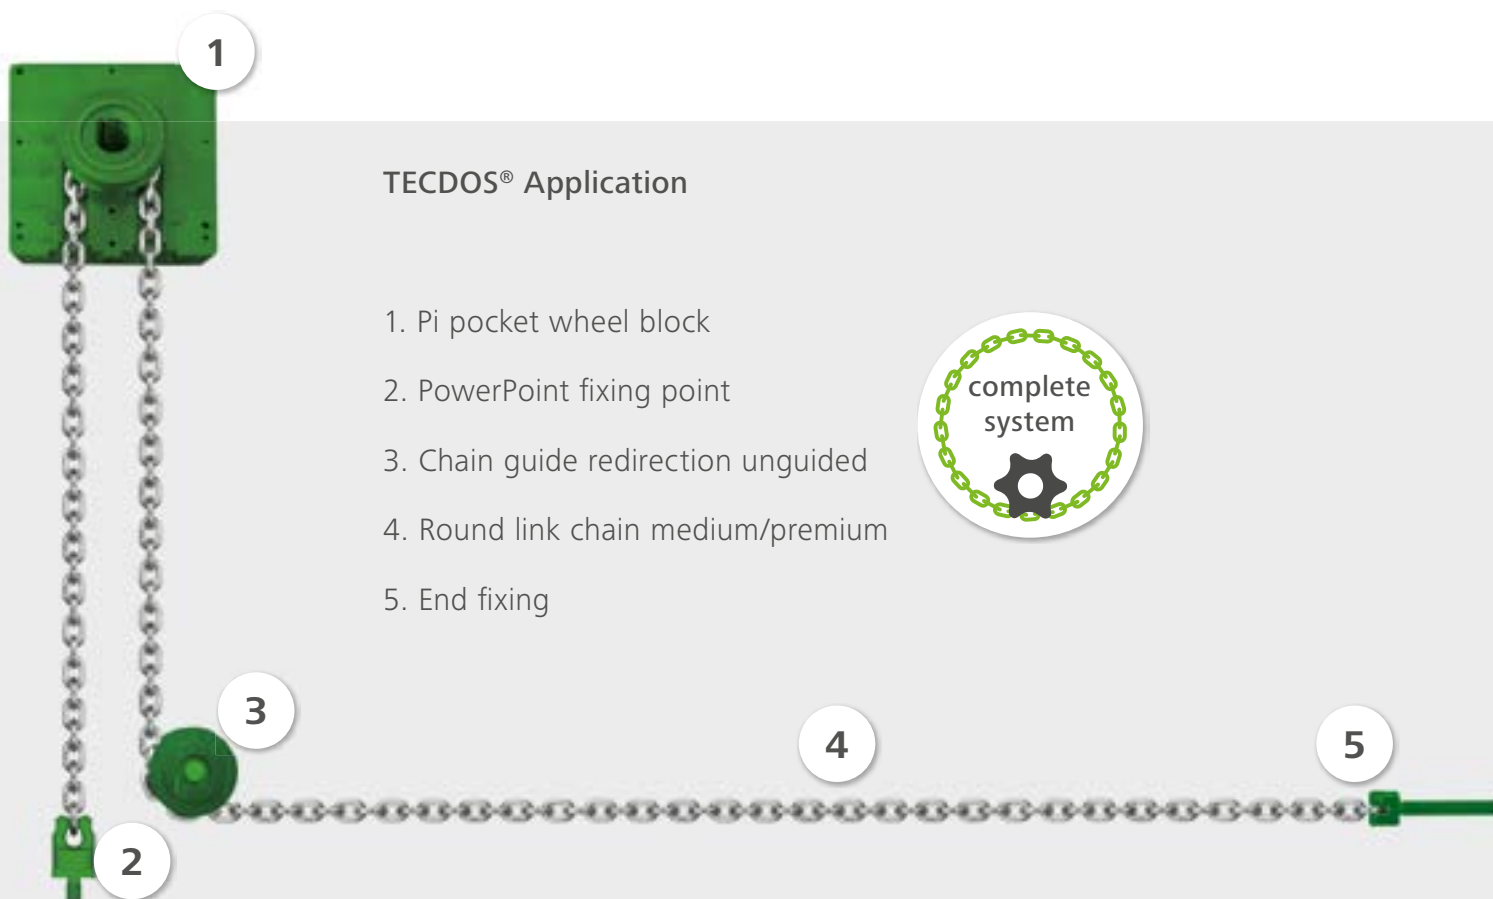

The selection of the chain guide depends on the application and the operation environment.

Please contact your RUD specialist for further information.

Technical data

→ p. 41

TECDOS® Application

1. Pi pocket wheel block
2. PowerPoint fixing point
3. Chain guide redirection unguided
4. Round link chain medium/premium
5. End fixing

4. TECDOS® Spare parts & components

4.4 RUD lift limiter

The lift limiter prevents the chain from "passing through" i.e. it serves as a travel route limiter on the unloaded sides of the chain.

Features:

- Limits the lift of a TECDOS drive system and
- Prevents the chain from being pulled through by the PI/ GAMMA or chain guides units

Technical data → [p. 41](#)

4.5 RUD chain connector

TECDOS chains and connectors form a reliable system. Both components perfectly fit in combination with the OMEGA DRIVE or chain wheels.

Features:

- Connects the chain to an endless chain loop
- Attention: Operating forces are limited to maximum power of the chain connector

Technical data → [p. 42](#)

4.6 TECDOS® End fixing

Axial adjustable end fixing for linking the chain and load-supporting structures

Features:

TECDOS End fixing:

- Transfers 100 % of the TECDOS chain operating forces
- axially adjustable

Technical data → [p. 42](#)

4.7 RUD foolproof high dynamic shackle

High tensile version with an integrated safety thread in the shackle bracket.

Features:

- Smooth bolt support in the shackle on both sides.
The bolt is turnable
- No bending strength in the thread (only a securing function)
- Optimal adaptation - max. mouth width with the smallest shackle bolt
- Owing to the turned clevis connection, it is extensively resistant to bending
- Long term securing by driving in the pre-assembled tensioning sleeve
- Special thread, thus distinctive in comparison to other shackle bolts
- Pre-assembled connecting bolt and tensioning sleeve

Technical data → p. 42

4.8 RUD PowerPoint fixing point

RUD fixing points are easy to rotate and always the right connection

Features:

- Rotating 360°, pivoting 230°
- Universal, unmistakable VIP connection for chain, hook and eye
- Double ball bearing for turning/rotating operations

Technical data → p. 43

4.9 RUD Cobra fork head hook

The Cobra hook with a ring connection and of course all the advantages of a RUD - clevis hook.

Features:

- Very robust design without a protruding hook tip
- The forged safety latch engages in the tip of the hook and is thus protected against lateral bending
- With a triple coiled corrosion protected double leg spring
- Thickened tip of the hook to prevent misuse
- Wear marks on both sides
- Gauge marks for measuring the width of the hook opening

Technical data → p. 43

RUD-Service

TECDOS high performance chains are extremely robust and require very little maintenance due to their simple construction. The following points are our support for a improved operating safety:

The RUD service concept

Measure, document, maintain

- Consultation and recommendation for spare parts
- Maintenance
- Replacement of competitors products with RUD products
- On-site consultation
- Measuring and testing
- On-site installation
- Fault elimination
- Inspection
- Retrofitting

The RUD engineering concept

Calculation, Construction & Consultation

- Product development and further development
- Dimensioning of the best components for your individual requirement
- Technical consultation, if needed on-site
- Synchronisation of all components to your individual requirements
- On request provision of CAD files
- Problem solving in case of difficult cases of operation

Discover now **RUD TECDOS chains drivers and components** on traceparts. RUD product-download simplifies design! **Click here** or search **www.traceparts.com/de** for **TECDOS**.

Conveying and driving

Whether you're looking for a complete bucket elevator, chain conveyor or chain drive, our wide experience in bulk goods handling, including cement, fertiliser, aggregates among many others, makes RUD the one-stop shop for your application.

For power generation with coal and biomass, as well in the recycling sector, RUD is a leading technology supplier for components and complete solutions based on round link chains and the FORKY product line. Whether for material feeding, ash removal or cleaning scrapers, RUD CRATOS has the solution you're looking for.

RUD components are the first choice worldwide for leading hoisting equipment manufacturers. We also offer a wide range of round link chains for industrial applications of all kinds.

RUD Powerblock and Dominator shackles set the benchmark worldwide and their unbeatable reliability makes them number one choice for high performance mining operations.

The RUD TECDOS team is developing and manufacturing drive solutions for turning, lifting, moving, telescoping or shifting. In addition to the component program, complete solutions like the TOOL MOVER are also available as the TECDOS OMEGA, GAMMA and PI drives.
