RUD-Art.-Nr.: 8500483-EN / V03 / 11.023

**EG-Konformitätserklärung**

entsprechend der EG-Maschinenrichtlinie 2006/42/EG, Anhang II A und ihren Änderungen

Hersteller: **RUD Ketten  
Rieger & Dietz GmbH u. Co. KG**  
Friedensinsel  
73432 Aalen

Hiermit erklären wir, dass die nachfolgend bezeichnete Maschine aufgrund ihrer Konzipierung und Bauart, sowie in der von uns in Verkehr gebrachten Ausführung, den grundlegenden Sicherheits- und Gesundheitsanforderungen der EG-Maschinenrichtlinie 2006/42/EG sowie den unten aufgeführten harmonisierten und nationalen Normen sowie technischen Spezifikationen entspricht.  
Bei einer nicht mit uns abgestimmten Änderung der Maschine verliert diese Erklärung ihre Gültigkeit.

**Produktbezeichnung:** StarPoint Ringschraube  
VRS

**Folgende harmonisierten Normen wurden angewandt:**

<u>DIN EN 1677-1 : 2009-03</u>	<u>DIN EN ISO 12100 : 2011-03</u>
_____	_____
_____	_____

**Folgende nationalen Normen und technische Spezifikationen wurden außerdem angewandt:**

<u>DGUV-R 109-017 : 2020-12</u>	_____
_____	_____
_____	_____

Für die Zusammenstellung der Konformitätsdokumentation bevollmächtigte Person:  
Michael Betzler, RUD Ketten, 73432 Aalen

Aalen, den 15.04.2021      Hermann Kolb, Bereichsleitung MA *Hermann Kolb*

Name, Funktion und Unterschrift Verantwortlicher

**EC-Declaration of conformity**

According to the EC-Machinery Directive 2006/42/EC, annex II A and amendments

Manufacturer: **RUD Ketten  
Rieger & Dietz GmbH u. Co. KG**  
Friedensinsel  
73432 Aalen

We hereby declare that the equipment sold by us because of its design and construction, as mentioned below, corresponds to the appropriate, basic requirements of safety and health of the corresponding EC-Machinery Directive 2006/42/EC as well as to the below mentioned harmonized and national norms as well as technical specifications.  
In case of any modification of the equipment, not being agreed upon with us, this declaration becomes invalid.

**Product name:** STARPOINT eye bolt  
VRS

**The following harmonized norms were applied:**

<u>DIN EN 1677-1 : 2009-03</u>	<u>DIN EN ISO 12100 : 2011-03</u>
_____	_____
_____	_____

**The following national norms and technical specifications were applied:**

<u>DGUV-R 109-017 : 2020-12</u>	_____
_____	_____
_____	_____

Authorized person for the configuration of the declaration documents:  
Michael Betzler, RUD Ketten, 73432 Aalen

Aalen, den 15.04.2021      Hermann Kolb, Bereichsleitung MA *Hermann Kolb*

Name, function and signature of the responsible person

Carefully read the operating instructions before using the VRS STARPOINT lifting points (hereinafter referred to as VRS). Ensure that you have understood all the contents.

Non-observation of the instructions can lead to injuries or damage and will invalidate the guarantee.

## 1 Safety instructions

### WARNING

Incorrectly mounted or damaged VRS and improper use can lead to injuries and damage to objects after a fall.

Check all VRS carefully every time before use.

- Withdraw all body parts (fingers, hands, arms etc.) from the danger zone during the lifting process (risk of crushing).
- The VRS may only be used by authorised and instructed persons in compliance with the DGUV Regulations chapter 109-017 and in compliance with any valid national regulations if used outside Germany.
- The WLL stated on the lifting point must not be exceeded (except vertical load see *Table 2*).
- The VRS has to be rotatable by 360° when securely screwed in.
- The VRS is not suitable for turning movements under load.

- No technical modifications must be made to the VRS.
- No persons are allowed in the danger zone.
- Standing below suspended loads is prohibited.
- Jerky lifting (strong impacts) must be avoided.
- Ensure a stable position of the load during lifting. Swinging must be avoided.
- Damaged or worn VRS must not be used.

## 2 Intended use

The VRS may only be used for attachment to the load or to load-handling equipment.

They are designed for suspending lifting means.

The VRS can also be used as a lashing point to suspend lashing equipment.

The VRS may only be used for the purposes described here.

## 3 Instructions for mounting and use

### 3.1 General information

- Temperature suitability: due to installed bolts in the VRS, the WLL must be reduced accordingly to the strength class of the bolts as follows:  
-40°C to 100°C → no reduction  
100°C to 200°C minus 15 % (212 to 392°F)  
200°C to 250°C minus 20 % (392 to 482°F)  
250°C to 350°C minus 25 % (482 to 662°F)  
**Temperatures exceeding 350°C (662°F) are not permissible!**

Pay attention to the application temperature of the nuts supplied (optional).

- Lock nuts according to DIN EN ISO 7042 (DIN 980) may be used up to a max. of +150°C.
- Collar nuts according to DIN 6331 may be used up to a max. of +300°C. Please also pay attention to the reduction factors.
- The VRS must not be exposed to aggressive chemicals, acids and their vapours.
- Clearly identify the attachment place for the VRS by means of contrasting colour markings.
- The VRS are supplied by RUD with a fracture-tested special screw (lengths see *Table 4*).

### Versions

- The metric vario lengths are supplied by RUD with a washer and a fracture-tested nut according to ISO EN ISO 7042 or with a fracture-tested collar nut according to DIN 6331.
- If the VRS is used only for lashing purposes, the WLL value can be doubled:  
LC = permissible lashing force = 2 x WLL

**NOTE**

If the VRS as lashing point is loaded with a force exceeding WLL, it must no longer be used as a lifting point afterwards!

If the VRS as a lashing point is loaded with a force only up to the WLL, it can still be used as a lifting point.

**3.2 Notes on assembly**

The following always applies:

- The attachment point so that the exerted forces can be absorbed by the base material without deformation.

Lengths of thread engagement derived by the employers' liability insurance association (based on the thread undercut):

1.5 x M in steel (minimum quality S235JR [1.0037])

1.5 x M in cast iron (e.g. GG 25)

Moreover, the employers' liability insurance association recommends as minimum lengths of thread engagement:

2 x M in aluminium alloys

2.5 x M in light metals of low strength

(M = thread size, e.g. M 20)

- In the case of light metals, non-ferrous metals and grey cast iron, the thread arrangement must be selected so that the thread load-bearing capacity corresponds to the requirements of the respective base material.
- Select the position of the VRS so that impermissible loads, such as twisting or turning of the load, can be avoided.
  - Single strand attachment:** vertically above the load's centre of gravity
  - Double strand attachment:** above and on both sides of the load's centre of gravity
  - Three or four-strand attachment:** evenly in one plane around the load's centre of gravity.

- Symmetry of load:

Determine the required WLL of the individual RUD lifting point for symmetrical resp. asymmetrical loading according to the following physical formula context:

$$W_{LL} = \frac{G}{n \times \cos \beta}$$

$W_{LL}$  = req. WLL of the lifting point / single strand (kg)  
 $G$  = Load weight (kg)  
 $n$  = Number of supporting strands  
 $\beta$  = Inclination angle of the individual strands

Number of supporting strands is:

	Symmetry	Asymmetry
Double strand	2	1
Three/four-strand	3	1

Table 1: Supporting strands (see also Table 2)

**NOTE**

In the event of an asymmetrical load, the WLL of a lifting point must at least correspond to the load weight.

- An even bolting surface ( $\emptyset E$ , see. Table 4) with a right-angled threaded borehole must be guaranteed. The threaded version must be designed according to DIN 76 (counterbore diameter at the max.  $1.05 \times d$ ). Threaded boreholes must be deep enough to allow the contact surface of the lifting point to lie flat. Create the through boreholes up to DIN EN 20273-middle.

- The VRS has to be rotatable by  $360^\circ$  when securely screwed in.

**NOTE**

For the VRS-F type, the star profile wrench must be disengaged.

Please pay attention to the following:

- For a **single lift**, hand-tightening with a star profile wrench until the bolt contact surface touches the screw-in surface is sufficient.

**WARNING**

The prescribed torque moment must not be exceeded!

**NOTE**

The star profile wrenches can be retrofitted. Wrench for retrofitting see Table 7.

- If the VRS **is to remain permanently on the load**, it must be tightened with the tightening torque ( $\pm 10\%$ ) depending on version, according to Table 4.
- If the VRS **is to perform flipping actions** (see section 3.3.2 *Permissible lifting and flipping actions*) tightening with the torque ( $\pm 10\%$ ) depending on version, according to Table 4 is required.

**NOTE**

If a torque wrench is used, an offset socket wrench is available (see Table 7).

- In case of jolting WLL or vibration, in particular for through bolt connections with nuts, there may be unintended loosening.

**Securing options:** keeping to the tightening torque or use liquid thread protection such a Loctite (adjusted to the application case, pay attention to manufacturer's instructions).

- Then check that everything has been mounted correctly (see Section 4 *Inspection / Repair / Disposal*).

### 3.3 Notes on use

#### 3.3.1 General information on use

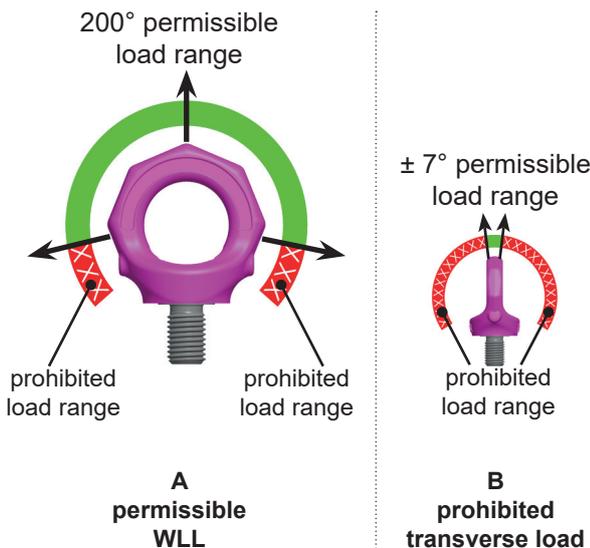

- Before use (e.g. by the striker), inspect the entire lifting point (secure bolt fit, strong corrosion, cracks in supporting parts, deformations). See section 4 *Inspection / Repair / Disposal*.

#### WARNING

*Incorrectly mounted or damaged VRS and improper use can lead to personal injuries and damage to objects after a fall. Check all VRS carefully every time before use.*

- RUD components are designed according to DIN EN 818 and DIN EN 1677 for a dynamic WLL of 20,000 load cycles.
  - Please note that during one lifting process, there might be several stress cycles.
  - Please note that due to the high dynamic load with high numbers of stress cycles, there is the risk of damage to the product.
  - The BG/DGUV recommends: at high dynamic WLL with high stress cycles (permanent operation), the working load must be reduced according to the engine group 1Bm (M3 according to DIN EN 818-7). Use a lifting point with a higher WLL.
- When engaging and disengaging the lifting means (lifting chain) no crushing, shearing, catching or impact points may be created.
- Prevent any damage to the lifting means on sharp-edged WLL.
- Before suspending the lifting means, set the VRS lifting point in direction of force (see *Pic. 1*).

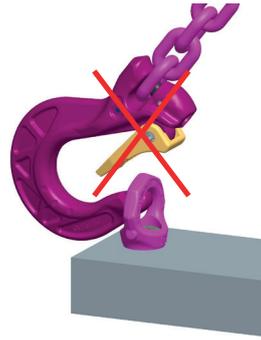

*Pic. 1:*

*A: Admissible load direction at load ring plane*

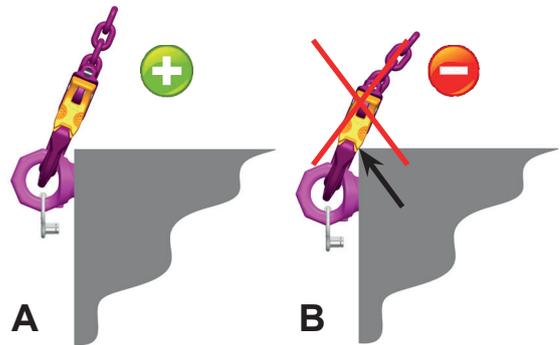

*B: Prohibited transversal load to the load ring plane*

- Please note that the lifting means must be able to move freely in the VRS lifting point.

*Pic. 2: Only use appropriate lifting means for hinging in the VRS*

- The lifting means must not be exposed to bending load!

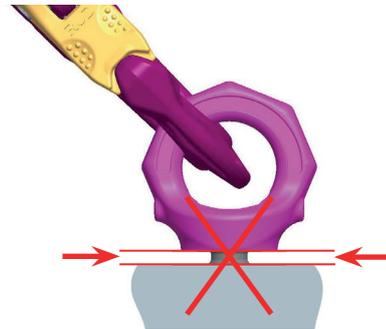

*Pic. 3:*

*A: Admissible load area*

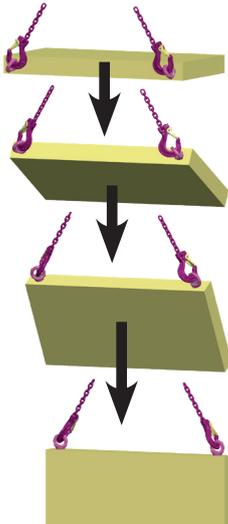

*B: Prohibited positioning or placing on edges*

- Always bolt the lifting point in fully.

*Pic. 4: The lifting point must be fully bolted in.*

### 3.3.2 Permissible lifting and flipping actions

Pic. 5: Possible flipping action with the VRS

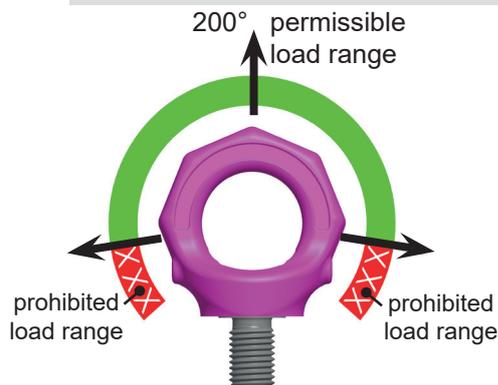

#### The following actions are permitted:

- Flipping actions where the lifting means are swivelled at load ring plane.

#### WARNING

The lifting means must not support itself on edges or other attachment parts or rest against them.

Pic. 6: Swivelling in load ring plane

- Flipping actions, where the VRS is turned around the bolt axis (**exception:** see section 3.3.3 *Permissible lifting and flipping actions*). After a maximum turn of 90°, the tightening torque of the bolt must be checked.

#### WARNING

Check the prescribed tightening torque moments before each lifting or flipping action.

### 3.3.3 Permissible lifting and flipping actions

- Rotating the VRS under load in axis direction of the bolt ( $\pm 15^\circ$ ) is prohibited.
- Not suitable for permanent turning movements under load.

## 4 Inspection / Repair / Disposal

### 4.1 Notes on regular checks

The operator must determine and specify the nature and scope of the required tests as well as the periods of repeating tests by means of a risk assessment (see sections 4.2 and 4.3).

The continuous suitability of the lifting point must be checked at least 1x per year by an expert.

Depending on the application conditions, e.g. when used frequently or if there is a higher level of wear occurrence or corrosion, it may be necessary to carry out inspections at intervals of less than a year. This inspection is also absolutely necessary after damage and special incidents. The inspection cycles must be specified by the operator.

### 4.2 Test criteria for the regular visual inspection by the user

- Correct bolt and nut size, and bolt-in length
- ensure bolts are secure → Check the tightening torque
- Lifting point is complete
- Complete, legible WLL information and manufacturer symbol
- Deformation on supporting parts such as ring and bolt
- Mechanical damage such as large notches, in particular in areas subject to tensile loads
- easy rotating of the ring around the bolt axis must be ensured.

### 4.3 Additional test criteria for the expert / repairer

- Cross-section changes due to wear occurrence > 10%
- Heavy corrosion
- Function and damage of the bolts, nuts and bolt thread.
- Additional inspections may be necessary, depending on the result of the risk assessment (e.g. check for cracks in load-bearing parts).

### 4.4 Disposal

Dispose of the discarded components / accessories or packaging in line with local regulations.

		At a lift with one strand and two parallel strands where the inclination angles are at the max. $\pm 7^\circ$ , the lifting methode can be assumed as a vertical lift.					When lifting with two, three or four leg lifting means, inclination angles of less than $15^\circ$ shall be avoided, if possible (Risk of instability).

Table 6: Inch thread (UNC / UN)

Subject to technical modifications

**For special versions see separate safety instructions.**

**Other special lengths and special surfaces are available on request!**

- 1 VRS with pipe inch thread
- 2 VRS with hexagonal extension adaptor  
Type 1+2  
(without recess)  
KMAT-No.: 8600620
- 3 VRS with hexagonal extension adaptor  
Type 3  
(with recess)  
KMAT-No.: 8600621

- 4 VRS with round extension  
Type 1  
(without recess)  
KMAT-No.: 8600622
- 5 VRS with round extension  
Type 2  
(with recess)  
KMAT-No.: 8600623
